## WFT VPN access Guide

### VPN Server Access

(The name of the VPN server is **vpn.wftus.com** (or you can use IP: **71.245.116.149**))

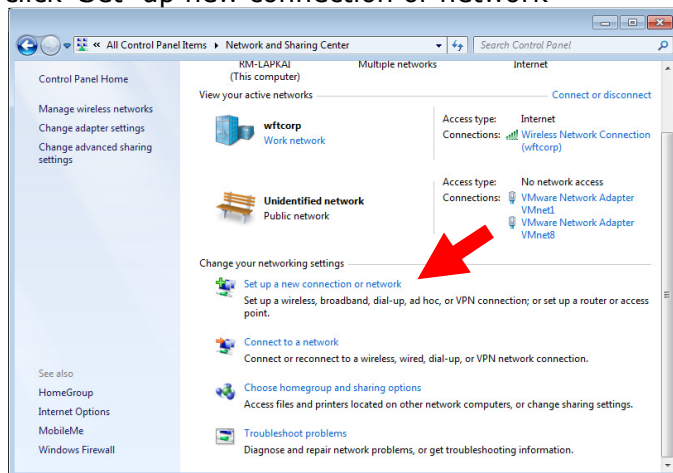

Please follow the procedure to create a new VPN connection on your PC

Open **Control Panel** from start Menu

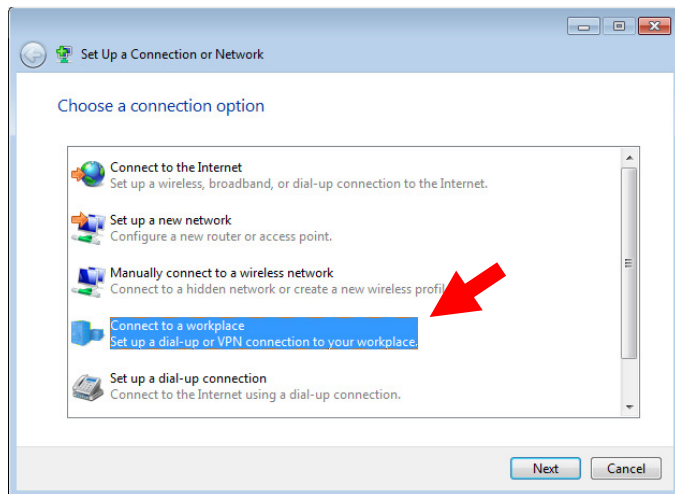

Start / double click 'Network Connections'

click 'Set up new connection or network'

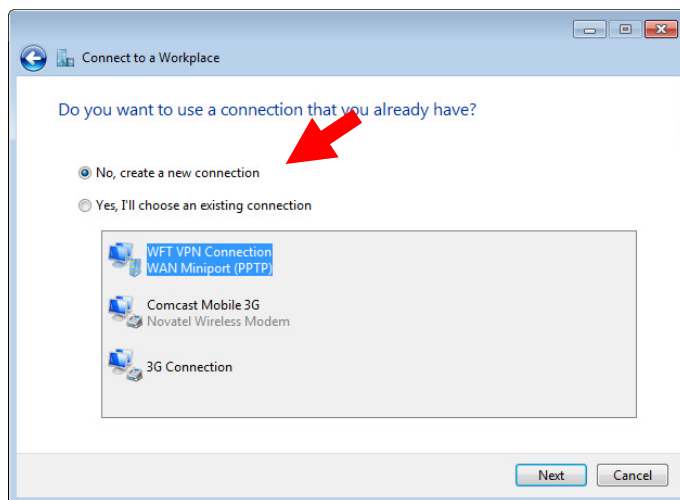

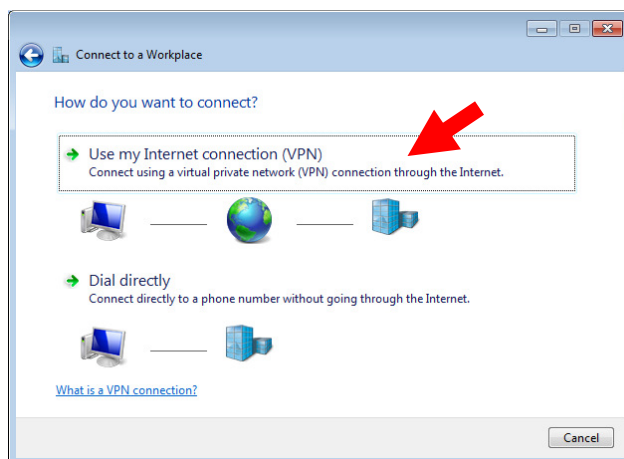

Click Connect to a workplace

Click Next

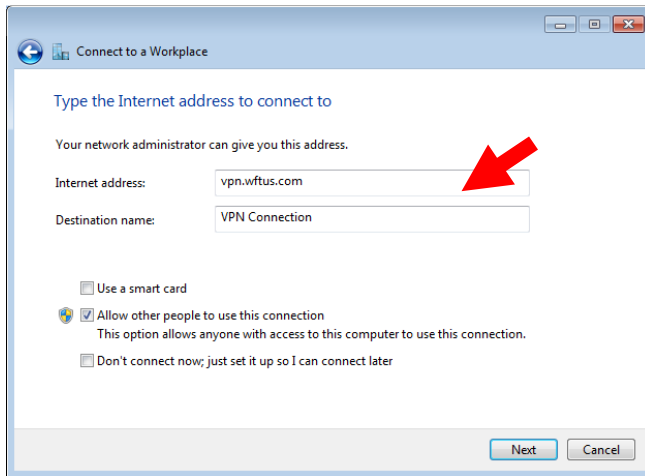

Click 'Use my Internet Connection (VPN)'

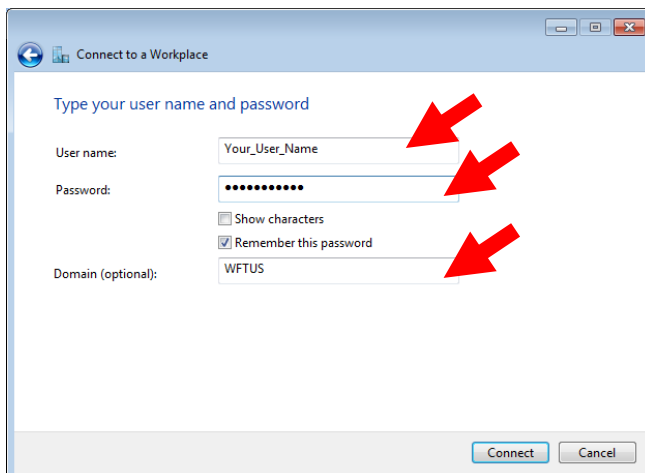

Last Updated: May 2011

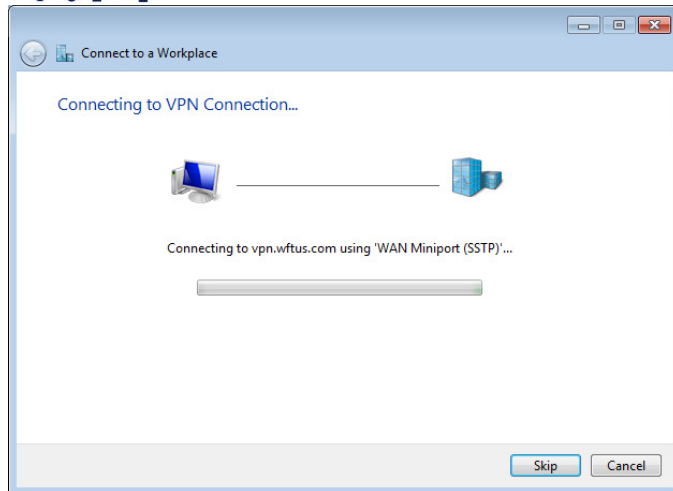

Provide hostname as **vpn.wftus.com** (or you can use IP: **71.245.116.149** to hide host name)

A screenshot of the 'Connect to a Workplace' dialog box. The title bar says 'Connect to a Workplace'. The main heading is 'Type the Internet address to connect to'. Below it, a message says 'Your network administrator can give you this address.' There are two input fields: 'Internet address:' with the text 'vpn.wftus.com' and a red arrow pointing to it, and 'Destination name:' with the text 'VPN Connection'. Below these fields are three checkboxes: 'Use a smart card' (unchecked), 'Allow other people to use this connection' (checked), and 'Don't connect now; just set it up so I can connect later' (unchecked). A sub-message under the second checkbox says 'This option allows anyone with access to this computer to use this connection.' At the bottom right are 'Next' and 'Cancel' buttons.

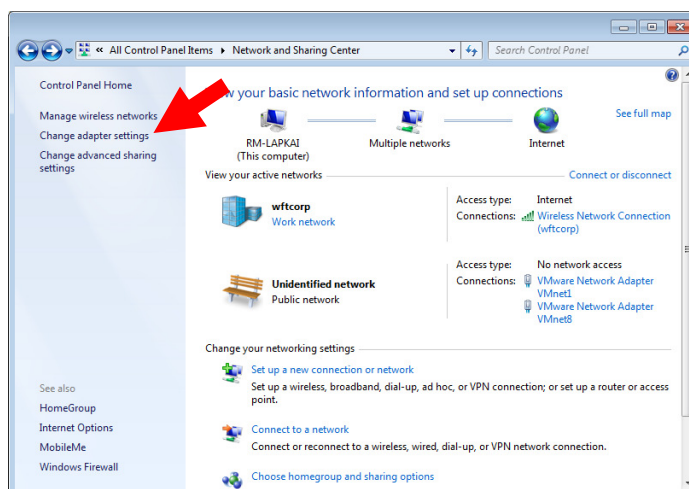

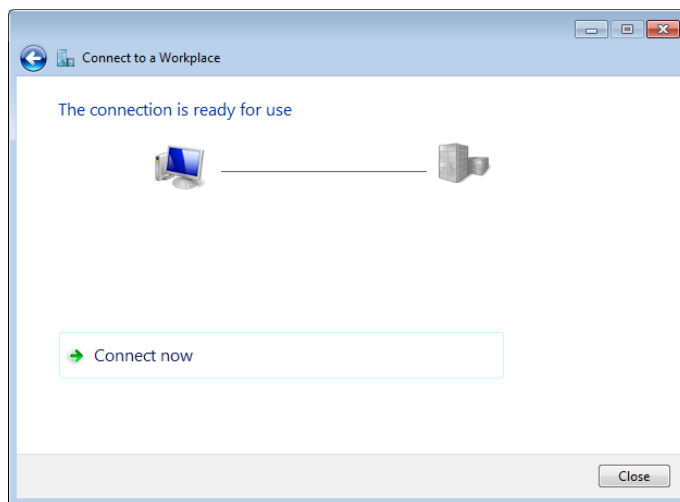

Provide User name, password and domain

A screenshot of the 'Connect to a Workplace' dialog box, showing the 'Type your user name and password' step. The title bar says 'Connect to a Workplace'. The main heading is 'Type your user name and password'. There are three input fields: 'User name:' with the text 'Your\_User\_Name' and a red arrow pointing to it, 'Password:' with a masked password '\*\*\*\*\*' and a red arrow pointing to it, and 'Domain (optional):' with the text 'WFTUS' and a red arrow pointing to it. Between the password and domain fields are two checkboxes: 'Show characters' (unchecked) and 'Remember this password' (checked). At the bottom right are 'Connect' and 'Cancel' buttons.

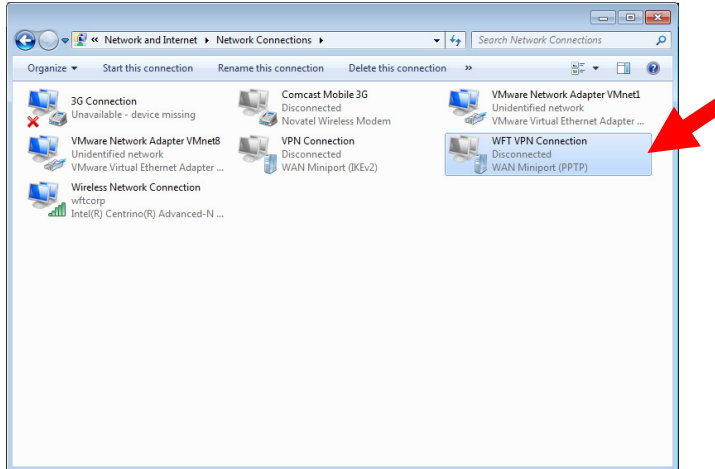

Click connect and click 'skip' on next screen.

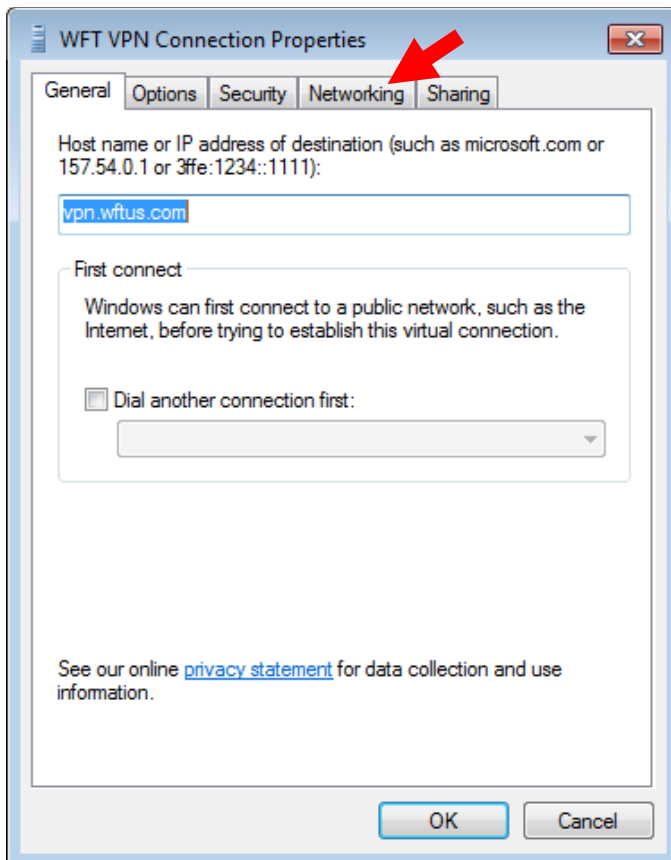

Click 'Close'

In the above screen click 'change adapter settings'

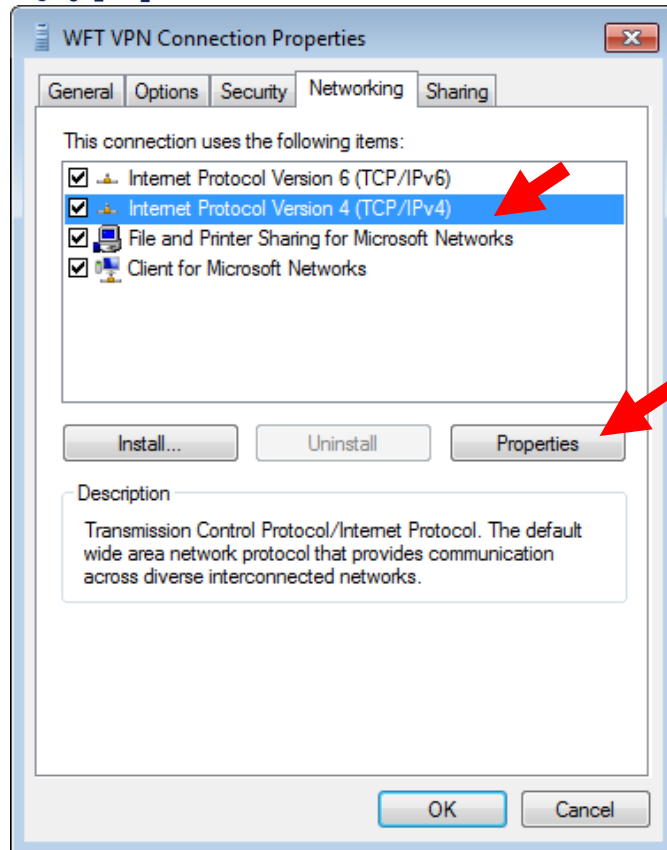

Right Click on the connection you created and click 'properties'

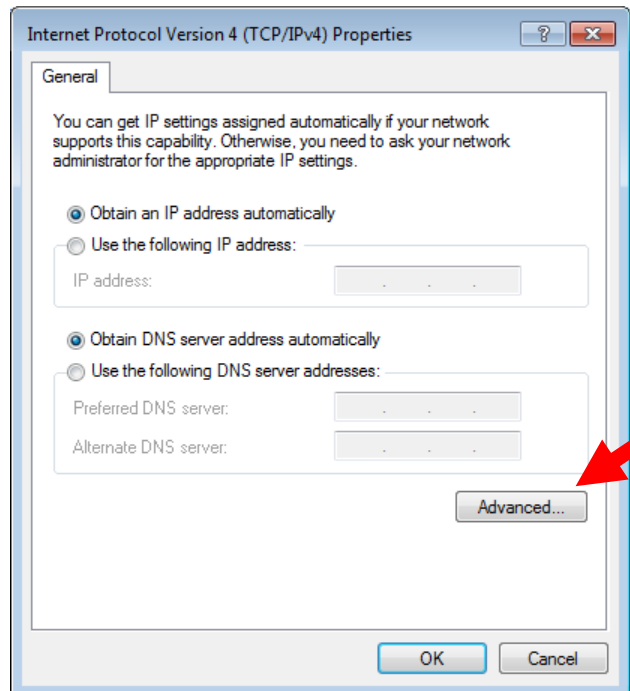

Click on Networking tab

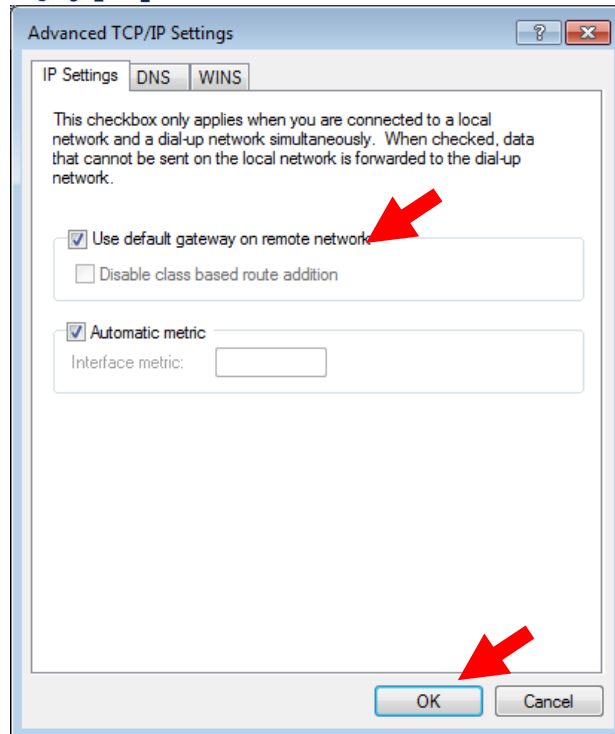

Last Updated: May 2011

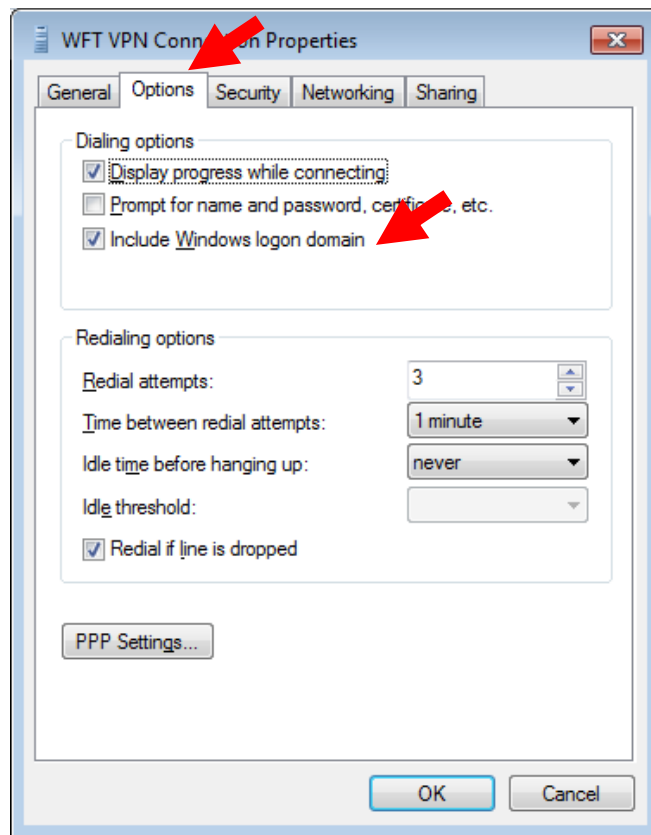

Select Internet Protocol and click 'Properties'

Click on 'Advanced Tab'

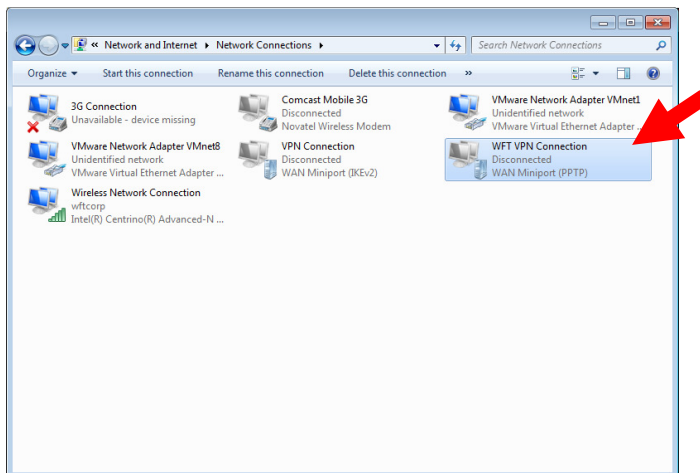

Make sure the above selections are made Click OK

Click 'options' tab and make sure 'Include Windows Logon Domain' is selected.

Double click on the connection you created.

You will be connected and dialog box will disappear.
