

**How can you realize the full  
benefits of SAP on WFTCloud**

**Break the cycle of  
project approaches?**

**Reach beyond the confines  
of technology silos?**

## **THROUGH A FOCUSED SAP PRIVATE & HYBRID CLOUD STRATEGY**

Some enterprises are already reaping the benefits of SAP Virtualization. They are ramping up utilization, slashing server counts, consolidating compute locations and controlling power costs.

By all reports, the numbers speak for themselves. However, what they do not speak to, is how they can move to the next stage of Virtualization to take advantage of Cloud. These efforts have been skewed

towards project-by-project approaches, geared to short-term savings, limited in scope and confined to individual silos - applications, servers, storage, networks and devices.

To realize this vision requires a unified strategy and a partner with comprehensive answers and experience to the technical, operational, business and industry issues you face.

## SAP PRIVATE & HYBRID CLOUD

WHERE DO YOU STAND ALONG THE TIMELINE OF CLOUD EVOLUTION?

You may already be reaping some benefits of virtualization. You know your IT must accelerate its response to changing markets and business needs such as:

- Delivering flexible costs and elastic computing (On-Premises or Hybrid)
- Automating processes and adopting policy-driven management to prepare the way for cloud computing
- Capitalizing on Green IT, reducing energy consumption and your carbon footprint and avoiding costly data center build-outs
- A solution to the IT demands of recent mergers and acquisitions

On the other hand, you may still be considering what the benefits of cloud computing might be for your enterprise. Will comprehensive analysis, best practices and financial analysis justify investment? Can you find a partner with expertise in hardware, software, systems administration and support, as well as facilities?

Wherever you stand and wherever we start, Wharfedale Technologies (WFTCloud) Services can guide you to an end state that is right for your business.

WFTCloud can manage the complexity of transformation and the evolution of virtualization extending the customer to the SAP

Cloud Computing Roadmap. WFT's IT experience is exceptional; our industry knowledge, profound.

We can prove the true value of SAP Private or Hybrid Cloud for your business. As an evolution of your IT infrastructure, cloud computing can create sustainable value in times of growth, in times of consolidation, even in times of retrenchment.
